Spectrophotometric Analysis Of Nitrates

A spectrophotometric procedure for determination of nitrate in water, soil extracts, and a variety of other sample types is described using one reagent solution which is easily prepared and stored. Sample and equipment requirements are minimal. Reduced chemical hazard, simplicity, and versatility represent improvements over existing methods.

Spectrophotometric Determination of Nitrate with a Single ...

Nitrate is one of the most important chemicals in agricultural and environmental management. Most methods for NO₃ analysis, however, require expensive equipment or complicated procedures. The objective of this study was to develop a simple, rapid, accurate procedure for NO₃ analysis that can be conducted in laboratories worldwide, without the need for specialized equipment.

MICROCHEMICAL JOURNAL 29, 307-310 (1984) Spectrophotometric Determination of Nitrite S. T. SULAIMAN AND D. AMIN Department of Chemistry, College of Science, Mosul University, Mosul, Iraq Received October 6, 1982 INTRODUCTION Nitrite ion plays an important role as a precursor in the formation of *N*-nitrosamines, many of which have been shown to be potent carcinogens (3, 5), and when correlated with other nitrogen forms in water, can provide an index for organic pollution.

Spectrophotometric determination of nitrite - ScienceDirect

A simple, rapid spectrophotometric method for the determination of nitrite and nitrate in water, tablets and water samples have been developed. Determination of nitrite is based on the reactions involving sulfanilic acid with methyl anthranilate as the coupling agents and determination of nitrate is based on their reduction to nitrite in the presence of Zn/NaCl.

A Spectrophotometric Method for the Determination of ...

Abstract. Abstract. A new flow injection analysis (FIA) method has been developed for determination of nitrites, nitrates, and their mixtures, based on the reaction of nitrites with rivanol (2-ethoxy-6,9-diaminoacridinium lactate) in HCl medium; the concentration of the diazonium salt formed is evaluated spectrophotometrically ($\lambda = 520$ nm). Flow-through determination of nitrates can be carried out by using the same reaction following prior reduction in a flow-through reductor filled with ...

A Spectrophotometric Method for the Determination of ...

Nitrate reacts with chromotropic acid in about 75% v/v sulfuric acid medium giving a water-soluble yellow product. Spectrophotometric measurement of the absorbance of the color at 410 millimicrons provides a means for the determination of nitrate in the concentration range of 0.2 to 20 milligrams per liter.

Spectrophotometric Analysis Of Nitrates

A sensitive analytical method for the simultaneous assay of nitrate and nitrite in water and some fruit samples is presented. The method is based on nitrite determination using the diazotization-coupling reaction by column preconcentration and on the reduction of nitrate to nitrite using the Cd-Cu reductor column.

This work describes an ultraviolet (UV) spectrophotometric difference method for quantitative assay of soil extracts for NO₃⁻ and NO₂⁻. The method is rapid, sensitive, and very reliable even in the presence of organic matter and other non-nitrate species that interfere with NO₃⁻ determinations and that are often found in soils.

The Determination of Nitrate and Nitrite in Soil Extracts ...

Being able to measure total nitrogen (TN) is important for following the nitrogen budget. In this chapter, we present the spectrophotometric method we use for determining TN. The method relies on oxidation and reduction steps, involving persulfate digestion of nitrogen compounds into nitrate followed by spectrophotometric determination.
